

Barrel and Cuboid Caps, Plugs & Strainers

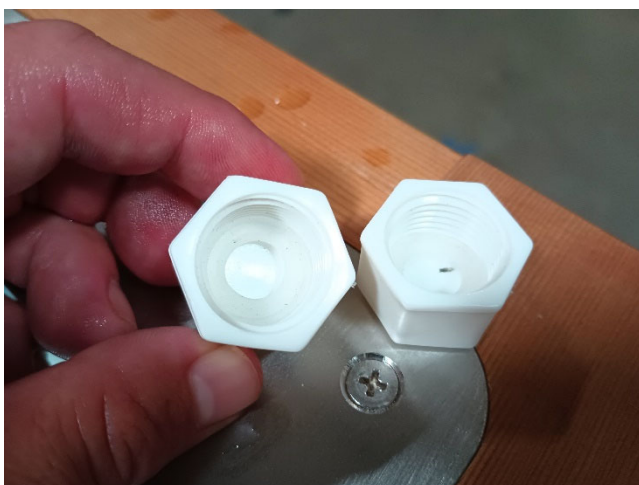

Hang on to the Caps and Plugs that come with your Cold Plunge! The Caps are great for protecting the threads on the Inlet and Outlet Fittings when the Cold Plunge is not connected to a Chiller. The Plugs are helpful for isolating the Cold Plunge from the Chiller when replacing the Filter or cleaning the Chiller Strainer.

When removing the Caps please be sure that the Gaskets on the inside of the Caps are not left on the Inlet or Outlet Fittings.

Please Note: Some Caps come with Gaskets that are clear and may be more difficult to see inside the Cap:

The silver Outlet Strainers can be installed on the inside of the Tub Outlet:
