Back of Control

Route the data cable (included with easy start) through the finished wall to the back side of the control. The other end of the cable runs to the Y-connector. See possible configurations in step 5.

NOTE: It is recommended to run the cable through electrical conduit.

DO NOT pinch, nail, staple, wedge, or bind the data cable.

DO NOT wrap the data cable around steam line or route it in a manner so that the hot steam line could melt the cable.

Any damage to the control cable will result in the control not working properly.

Carefully connect the data cable to the generator and control BEFORE turning power on to the generator.

- Do not staple, strain or damage data cable
- Align pins to receptacle visually before tightening
- Do not force plug
- Hand tighten only
